Hi Tayfun,

I didn't understand what you mean by "triple-like structure". Do you refer to the picture in the GSI report?

Are the plots in your last post from the ToF-start or from the ToF-stop detector?

For the ToF-start, it is important to also have a good calibration of both FRS-TPCs at S4 in order to get a good extrapolated particle position at the ToF detector.

Did you use the simplified correlation plots (code from my last post) these plots or are they done in the "standard way".

Michael
