Hello,

I've installed latest FairROOT version, later I opened file config.sh and see this:

```
export FAIRLIBDIR="/opt/fair_install/FairRoot/build/lib"
```

in FairRootInst/bin I have FairRootConfig.sh but it points to

```
"/opt/fair_install/FairRootInst/build/bin"
```

Why config set this variable do ..FairRoot (or FairRootInst) /build/lib instead of ..FairRootInst/lib?

(I've set CMAKE_PREFIX option did I missed something?)

Ok, it was conflict with previous installation after cleaning up my ~/.bashrc it works.
