I do first vertex fit lambdas. I just leave it out here.

```
for (int j=0; j<lambda0.GetLength(); ++j){
    PndKinVtxFitter vertexfitterLambda0 (lambda0[j]);
    vertexfitterLambda0.Fit();
    RhoCandidate * lambda0Fit = lambda0[j]->GetFit();
}

for (int j=0; j<antiLambda0.GetLength(); ++j){
    PndKinVtxFitter vertexfitterAntiLambda0 (antiLambda0[j]);
    vertexfitterAntiLambda0.Fit();
    RhoCandidate * antiLambda0Fit = antiLambda0[j]->GetFit();
}
```
