
Subject: [Fixed] PndMvdStripHitProducer undeclared function

Hello,

I just got an undefined reference when linking to the libMvd, and the following member function is not implemented.

```
/** Specify the branch & folder names for the I/O */  
void SetBranchNames(TString inBranchname, TString outBranchname, TString folderName);
```

Since we mostly have macros that use the shared libraries, these errors usually do not appear unless you link to that library from somewhere else. Maybe we can turn on -Wl,--no-undefined to avoid these kind of errors...

Cheers,

Stefan
