Hello Ajay,

 you need to set up FAIRROOTPATH as indicated in the wiki:

 https://panda-wiki.gsi.de/foswiki/bin/view/Computing/PandaRootInstallGit
?validation_key=%3f2fc8f1252fa6a9526c9a25057e2975c0

Please, make sure also to setup SIMPATH properly.

Indeed, the error on genfit and GenfitTools is due to the non available server, for the time being.
Stefano sent an email how to proceed in such a case, some days ago. You can find instructions here:

https://fairroot.gsi.de/?q=node/101

Then, everything should work fine.
I hope it helps,

Elisabetta
