Dear all:

Following one of the lines given by Dima during his nice workshop, one can also play around with the fancy event viewer we have developed for the CALIFA detector, which is also updated in svn (trunk branch).

Update the `/r3broot/evtvis/` and `/r3broot/macros/r3b/califa/` directories from svn (trunk branch). Run a small simulation using macro `r3bsim.C` as it is there, and then, run macro `califaEventDisplay.C`

You must see an event viewer with several tabs holding histograms and projections from CALIFA detector in different data levels.

Take a time to look at it and let us know if you get or find out any error.
