I have modified the r3ball.C and r3bsim.C in order that the scheme works for both ROOT 5 and 6. Changes are merged. Please rebase your feature branch from dev branch of main repository and push your branch to the origin.

If you volunteer, you could apply the changes for the rest of r3bsim.C files.

The only drawback, that the path to r3ball.C macro is relative. So, for example in case you work with macros/r3b/califa/r3bsim.C, you need to use `#include "../r3ball.C"`
