Hi Marcel,

As far as the Analysis & Rho side is concerned, try the patch in the spoiler below. Basically now it tries to create MC Cands even if we have no MC Track array. This results in a message for each event. With the patch that message won't appear.

As the pi0 combinations go:

```
RhoCandList gammas, pi0s;
while (theAnalysis->GetEvent() && i++<nevts){
    theAnalysis->FillList(gammas, "Neutral");
    pi0s.Combine(gammas,gammas);
    ...
}
```

Cheers!

Ralf
