It is defined in function CheckIfSensitive() - file R3BLand.cxx, line number 451. You have to implement the check whether string volName contains "wrapping", and return kTRUE in this case.

NOTE: this will produce LandPoints also for wrapping volumes, which does not really make sense. To avoid it: implement at line 151 (after call to StepHistory()) check whether volume name contains "wrapping". If yes - make return kTRUE. This will store FirstHits but not the points.

Best regards,
Dima
