Hello Stefano,

echo $SIMPATH
/home/prencipe/panda/fairsoft_mar15/buildFairSoft/
[prencipe@pool-254-22-zam037 buildPanda]$ ls $SIMPATH
bin include lib lib64 share

[prencipe@pool-254-22-zam037 buildPanda]$ echo $FAIRROOTPATH
/home/prencipe/panda/fairsoft_mar15/buildFairRoot/
[prencipe@pool-254-22-zam037 buildPanda]$ ls $FAIRROOTPATH
bin include lib share

Today I removed everything again, and re-start all process from scratch.

I do cmake with the option:

cmake -DUSE_DIFFERENT_COMPILER=TRUE ../../mar15

I see lots of warnings [...][-Wshadow], especially wit hthe packages related to Lumi* and boost.

But in the end today I succeeded. With the older releases (=< oct14) I've never found so much troubles. It is the second time that I try to install mar15 (or trunk revisions) in the last month, and 2 times I got problems. Something is weird.... anyway, today I got it running. So, now I can spend some time in genfit2 debugging.

My best regards, and thanks,
Elisabetta
