I have been trying to follow the PandaRoot installation guide and have a problem regarding the installation of the external packages of PandaRoot. I followed the instruction as per the webpage https://panda-wiki.gsi.de/foswiki/bin/view/Computing/PandaRootInstallGit?validation_key=%253fc115c8c81fb2e2a7188fe38a913bbbfc. I attach the screenshot of the error message at the end of the faulty installation. Please help if anyone has any suggestion. My Ubuntu version is 14.04.
