Hi again!

It took some time to do the update.

I did the following:

```
-bash-4.1$ svn propedit svn:externals .
```

edited this:

```
base      -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/base
generators -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/generators
geobase    -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/geobase
ora        -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/ora
parbase    -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/parbase
cmake      -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/cmake
geane      -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/geane
eventdisplay -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/eventdisplay
trackbase  -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/trackbase
fairtools  -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/fairtools
genfit -r 313 https://genfit.svn.sourceforge.net/svnroot/genfit/core
```

And did

```
svn update
```

in the pandaroot folder.

After some time downloading/updating files (with some connection problems in between) I got the following message:

Conflict for property 'svn:externals' discovered on ''.

Select: (p) postpone, (df) diff-full, (e) edit,

(s) show all options: p

I selected postpone from the options I was given.

After some more time downloading/updating stuff, I see that it is updating to revision 28714 (why, if I chose 11867?)

Updated to revision 28714.

Summary of conflicts:

Property conflicts: 1

Whatever, I continue anyhow with the compilation:

```
-bash-4.1$ cd
-bash-4.1$ cd buildpanda_v11867_may11/
-bash-4.1$ cmake ../pandaroot_v11867_may11/
-- NOT Found FAIRBASE
CMake Error at CMakeLists.txt:40 (MESSAGE):
  You did not define the environment variable FAIRROOTPATH which is needed to
  find FairRoot. Please set this variable and execute cmake again.
```

```
-- Configuring incomplete, errors occurred!
```

See also

```
"/data/work/kpha4/moraespi/PandaRoot/buildpanda_v11867_may11/CMakeFiles/CMakeOutput.log".
```

Without succeeding... (I thought I don't need the variable FAIRROOTPATH for an older version of the software).

Any more ideas??? I am not sure that I edited correctly the file you told me...

Thanks again in advance.

Cheers,
Mamen.
