Subject: FairSoft with GCC in MacOs
Posted by Yassid on Fri, 20 Nov 2015 01:46:18 GMT

Dear all

I built gcc 5.0.x in Yosemite because I need to use OpenMP in my FairRoot-based framework. Nevertheless, after selecting the GCC in the configure script It fails at some point with the first package (which is CMake).

Any advice or hint?

Thank you very much in advance!
