Hello Stefano,

About Fairroot version jul15p2, you said me
in September meeting in GSI, that it is installed in Prometheus cluster in GSI,
but pandaroot is crushed at this case.

Florian said me the commands for work with new Fairroot at the Prometheus
and Radek has helped me to compile last pandaroot with new Fairroot in Vienna.

I hope, new version of Pandaroot, about which you write,
with new version of Fairroot will work without any crushes at the Prometheus GSI.

Best regards,
Aida
