Dear Mr. Kresan,

I followed exactly all the steps of the webpages you sent me.
The only difference is that I download the source from github instead of using a tarball.
I tried to switch between master and dev branch of FairSoft and FairRoot and R3BRoot.
None of this solves the problem. I also tried to switch the FairRootConfig.sh file on and off and this also does not solve the problem.

Thank you for all the effort you put in it.
Christiaan.
