Hi Ralf,

I fully agree to the scheme you have proposed.

We will not need "old" RawItem classes as soon as R3BRoot unpackers (3 or 4 existing) will be substituted by Ucsb Readers. But I would like to keep them for the transition period, so I will rename them to Unpack level.

Technical question, about the naming convention. For example, R3BNeulandHit and R3BNeulandDHit are self-informative. Do we need "Item" suffix for Mapped and Cal levels, something like R3BNeulandCalItem?

Cheers,
Dima
