Yes, the default macros are working now.

In another attempt to fix my problems, which you apperantly don't have, I performed svn
update and tried to recompile pandaroot completely. It finishes with the following:
[100%] Generating ../lib/libCATracking.rootmap
cannot open linkdef file CATrackingLinkDef.h
[100%] Built target libCATracking.rootmap

Then, when I try to run the root macros, root gives the following error:
dlopen error: /home/marcel/jan16/pandaroot/buildPanda/lib/libEmc.so: undefined symbol:
_ZN20PndEmcCRRCPulseshape11ShowMembersER16TMemberInspector
Load Error: Failed to load Dynamic link library
/home/marcel/jan16/pandaroot/buildPanda/lib/libEmc.so

So, some automatically generated symbol is not defined, apparently in an inherited function in
PndEmcCRRCPulseshape. I think I've seen this error before, but don't know how to fix it. Any
suggestions?
