Hi,

These are problems which we get before with ROOT and apple clang

https://sft.its.cern.ch/jira/browse/ROOT-6524

The problem is that the ROOT team does not support ROOT5 any more and it will be hard to ask them to correct this, they said since one year that they will stop even the bug fixes in ROOT5.

I tested with ROOT 6 and every thing works without problems (just the one correction I send to you before!) can you go to ROOT 6?

best,

Mohammad
