Dear all,

the FairSoft release nov15, in particular the nov15p4, has been tested in Mac (Yosemite) and on Ubuntu 16.04, and the results with the PandaRoot trunk are compatible with the old ones. This means that you can start to use nov15p4, as suggested version of FairSoft for developers. I have updated the wiki pages, now the suggested trunk version is 29053.
