This is because the decay  $\eta' \rightarrow \rho^0 + \gamma$  has no model included, one can see this in the printout:

2.  $\eta' \rightarrow \rho^0 + \text{photon}$

Interaction model(s):

[eta'\_fixed\_g\_rho0] Fixed product masses {}

[eta'\_genbod\_g\_rho0] Pluto build-in genbod {/genbod}

I don't know if this is the correct physics model, but a decay with a simple Breit-Wigner can be done by adding these lines:

```
PHadronDecayM1N *newmodel =
```

```
    new PHadronDecayM1N("rho_model@eta'_to_rho0_g", "Patched rho model", -1);
```

```
makeDistributionManager()->Add(newmodel);
```
