Hello Dima,

thanks for your reply. I rebuild the r3broot according to your reply and it worked.
But I would like to unpack the experimental data during the beam time which is running now.
Therefore I added the command line

```
export UCESB_DIR=/lynx/Lynx/land/usr/land/landexp/jun2016/unpacker
```

in addition to your instructions, after the command line

```
export FAIRROOTPATH=/cvmfs/fairroot.gsi.de/gcc_4.8.4/fairroot/v-15.11c_fairsoft  
-nov15p1_root6
```

before cmake. I was able to compile the cmake but it failed during the make:

/u/latar/r3broot_dev/R3BRoot/r3bsource/ext_h101_fi4.h:408:22: error: 'EXT_STR_h101' has no member named 'fiberfour9tv'

```
        fiberfour9tv,          UINT32,\n
```

I modified the scripts in /u/latar/r3broot_dev/R3BRoot/r3bsource according to the current experiment which was necessary.

These modifications i got from Ina Syndikus and r3broot works well in her case after an appropriate update.

Cheers,

Leila
