Hello Dima,

thanks for your reply. I rebuild the r3broot according to your reply and it worked. But I would like to unpack the experimental data during the beam time which is running now.

Therefore I added the command line

export UCESB_DIR=/lynx/Lynx/land/usr/land/landexp/jun2016/unpacker

in addition to your instructions, after the command line

export FAIRROOTPATH=/cvmfs/fairroot.gsi.de/gcc_4.8.4/fairroot/v-15.11c_fairsoft -nov15p1_root6

before cmake. I was able to compile the cmake but it failed during the make:

I modified the scripts in /u/latar/r3broot_dev/R3BRoot/r3bsource according to the current experiment which was necessary.

These modifications i got from Ina Syndikus and r3broot works well in her case after an appropriate update.

Cheers, Leila
