Subject: Forward TOF particle identification
Posted by StefanoSpataro on Fri, 29 Jul 2016 09:12:47 GMT

Dear all,
from svn release 29353 you can start to use the pid for forward tof
(PndPidFtofAssociatorTask),
The task has been added to the pid chain in the master classes: this means that if you use
master macros and update svn, you will run it automatically, and you can add it in your
analysis code.
