Dear all,

the new suggested versions of the code for developments are:

FairSoft may16p1

FairRoot v-16.06

PandaRoot trunk 29475

In the latest trunk the standard dirc geometry in master macros has been slightly updated, dirc_e3_b3_l6_m40.root.

Without a feedback from the user side, in particular for the day1 setup, we cannot create a new release for analysis. Be aware.
