Hello Everyone,

I have installed trunk CBM root. I am trying to plot invariant mass spectra of dimuons. for that I have taken jpsi.root as input signal and urqmd.auau.10gev.centri.root as background input to much_sim.C macro.

But before that I tried open urqmd.auau.10gev.centri.root file then it gave me following error

```
dlopen error: /home/sudhir/CBM/cbm_source_trunk/build/lib/libPluto.so: undefined symbol:
_ZN3TF16BrowseEP8TBrowser
```

```
Load Error: Failed to load Dynamic link library
```

```
/home/sudhir/CBM/cbm_source_trunk/build/lib/libPluto.so
```

```
Error in <TCint::AutoLoad>: failure loading dependent library libPluto.so for class UEvent
```

please help me regarding this issue.

waiting for your reply.
