Hi everyone,

I am plotting the invariant mass spectra of dimuons using cbm root trunk.

For that I have used ipsi.root as a input signal file. so when I am trying to plot invariant mass spectra I am supposed to get peak around mass of jpsi i.e. around 3 gev. but I am getting peak around 0.6 gev, so I am not able to resolve this problem.

Please help regarding this.

waiting for your reply.
