Hi all,

I am not sure if most of you received the e-mails from HPC-info@gsi.de mailing list. There was a crash of the file system on Kronos last week. Some of the data are lost. There is a list which contains information about lost files.

Subject: Overview of unlinked files from OST31 and OST32

Date: Thu, 27 Oct 2016 11:16:55 +0200

From: Thomas Stibor <t.stibor@gsi.de>

Reply-To: hpc@GSI.DE

To: HPC-INFO@gsi.de

To whom it may concern:

Due to an unrecoverable ZFS/Lustre crash, data stored on OST31 and OST32 are lost. The meta data still existed as "???????? ?..." filenames in the Lustre mount point, however, the corresponding bulk data which was stored on the OST31 and OST32 was damaged due to the crash and thus lost. A cleanup process was started which removed the meta data of OST31 and OST32. A list of lost files is provided at:

/lustre/nyx/unlink_files_OST31_OST32/by_directories# ll

total 184590

-rw-r----- 1 root ukt 111191 Oct 27 10:28 unlink_files_nyx-directory-ukt
```

For each directory in /lustre/nyx/\$DIR a file named unlink_files_nyx-directory-\$DIR is created which contains the lost files. Access is granted with proper group read rights.

Best wishes,
Thomas

Best regards,
Jenny
