Dear all,

I have the need to run again some jobs in an old pandaroot release: oct14.

I installed again this release today. Following the instructions at <https://panda-wiki.gsi.de/foswiki/bin/view/Computing/PandaRootSimulation> Kronos I see:

```
prencipe@lxbk0198:/cvmfs/fairroot.gsi.de/fairroot$ ls
v-15.07a_fairsoft-jul15p3_root5 v-15.11c_fairsoft-nov15p1_root5
v-15.11e_fairsoft-nov15p6_root6
v-15.07a_fairsoft-jul15p3_root6 v-15.11c_fairsoft-nov15p1_root6
v-15.11_fairsoft-nov15p1_root5
v-15.07b_fairsoft-jul15p3_root5 v-15.11d_fairsoft-nov15p1_root5
v-15.11_fairsoft-nov15p1_root6
v-15.07b_fairsoft-jul15p3_root6 v-15.11d_fairsoft-nov15p1_root6
v-16.06a_fairsoft-may16_root5
v-15.11a_fairsoft-nov15p1_root5 v-15.11e_fairsoft-may16_root5
v-16.06a_fairsoft-may16_root6
v-15.11a_fairsoft-nov15p1_root6 v-15.11e_fairsoft-may16_root6
v-16.06_fairsoft-may16_root5
v-15.11b_fairsoft-nov15p1_root5 v-15.11e_fairsoft-nov15p6_root5
v-16.06_fairsoft-may16_root6
```

and

```
prencipe@lxbk0198:/cvmfs/fairroot.gsi.de/fairsoft$ ls
jul15p3_root5 jul15p3_root6 may16_root5 may16_root6 nov15p1_root5 nov15p1_root6
nov15p6_root5 nov15p6_root6
```

I remember that the release oct14 was linked to the apr13 external packages. Does anybody know to what shall I link SIMPATH and FAIRROOTPATH? Please, do not point me to the wiki page of suggested version of the code: it does not work for me. An explicit example would be very much appreciated.

I would like to check which of my files, ported in kronos some months ago, still exist, as I was informed that whatever was in the disks called OST31 and OST32 is destroyed. This for me would mean almost all the bkg production for the Ds2317 analysis gone, and all files for the Z3730 tests (basically everything I worked in the past 2 years).

Looking forward for your answer, I thank you in advance for your useful help.

Best regards, Elisabetta
