Hi Elisabetta,

you can get the old external packages still from the subversion repository

Quote:

svn checkout <https://subversion.gsi.de/fairroot/fairsoft/release/apr13>

After the download you should be able to call the configure.sh script to start the installation, but I am not sure if all the packages in the needed versions are still available and if the compilation of the old packages with the new compiler will work.

Ciao

Florian
