Could you please remove again the complete tools/root directory. Since I have no idea what goes wrong please do the git part manually.

```
cd tools
git clone https://github.com/root-mirror/root
cd root
git checkout -b tag_v5-34-36 v5-34-36
```

After these steps you should have the correct root branch and you can rerun the configure.sh macro from the main directory.

Ciao

Florian
