Dear Tobias and all,
thank you very much for providing new official release for day1. I tried to make some tests (with ppbar->e+e- at 1.7 GeV/c) but there are few things that I did not understand if they come from my analysis code or from the version of PANDAROOT:

1- Peak of the reconstructed angle around 90° (Lab) (Fig.1, Fig2)
2-Deposit energy in the EMC at transition region between barrel and forward is zero (Fig3)

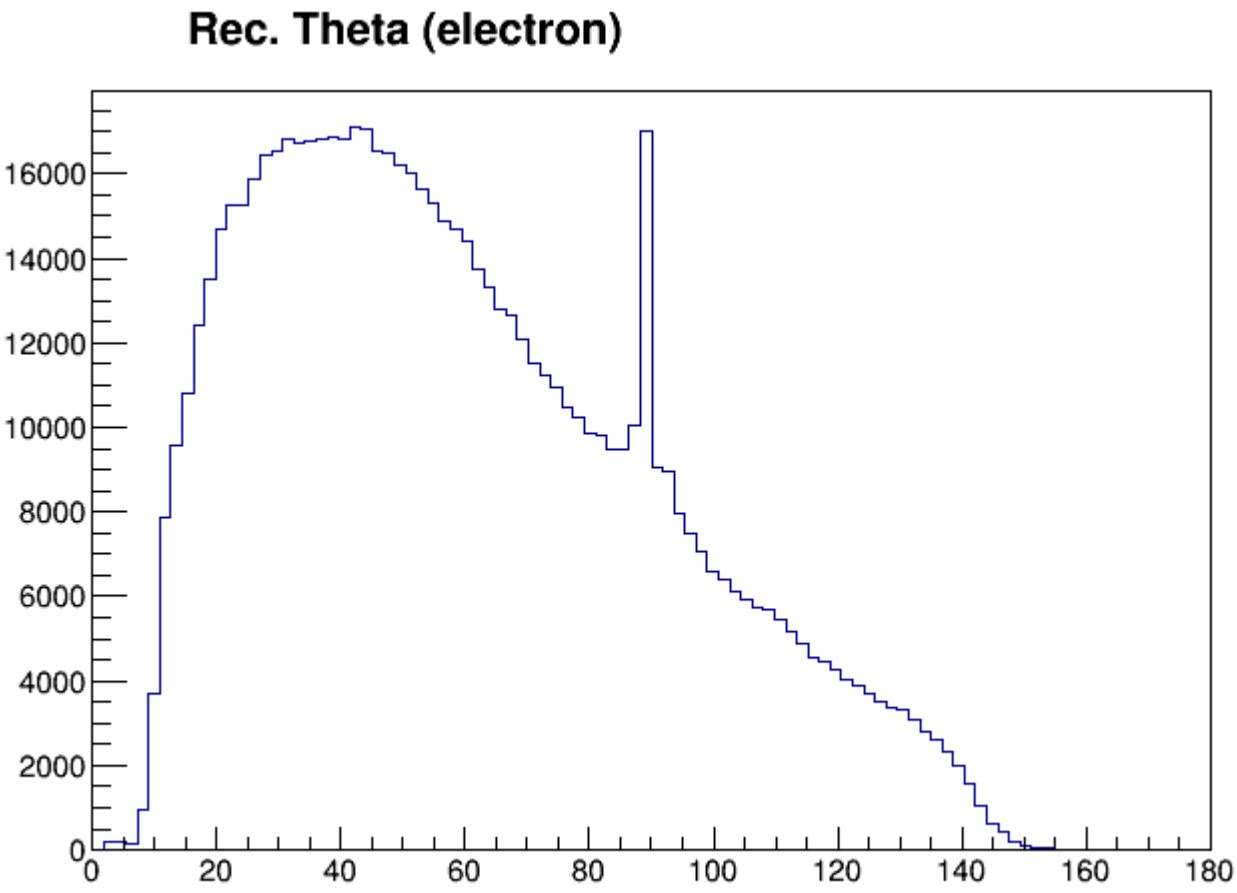

Macros are from "macro/day1/" of the feb17 release.

Thank you,

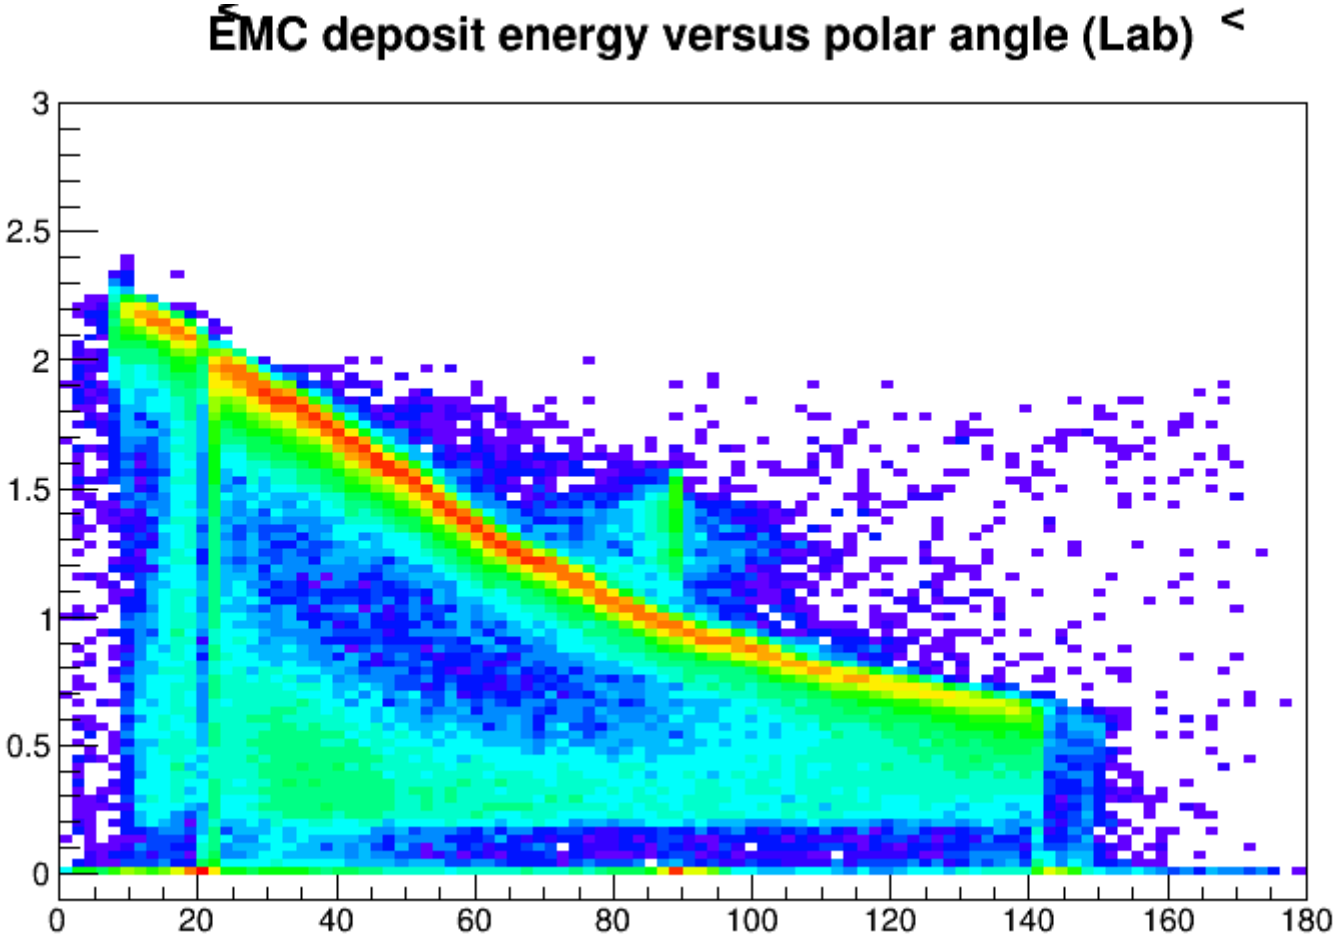

Alaa
