Subject: CALIFA-SiTracker-GLAD geometry conflict

Hello,

I find a conflict of geometry among the following detectors, as in attached picture.
detGeo.Add(new TObjString("GLAD"), new TObjString("glad_v13b.geo.root"));
detGeo.Add(new TObjString("CALIFA"), new TObjString("califa_17_v8.11_cc0.2.geo.root"));
detGeo.Add(new TObjString("STaRTrack"), new TObjString("startra_v16-300_2layers.geo.root"));

Could you tell me which detectors should be moved to simulate experiments with setup expected for 2018?

Thanks in advance.
Best regards,
Anna
