That problem is on me - there was a change to FairMQ in FairRoot/dev which I do not yet have accounted for.

In the meantime you can simply exclude that specific file from build, that is in

neuland/CMakeLists.txt

```
if(ROOT_VERSION_MAJOR GREATER 5)
# add_subdirectory(reconstruction) <-- don't build that for the moment
  add_subdirectory(clustering)
  add_subdirectory(digitizing)
else(ROOT_VERSION_MAJOR GREATER 5)
```

Best,
Jan
