Subject: Re: Installation fails Posted by Jan Mayer on Fri, 17 Mar 2017 12:22:08 GMT View Forum Message <> Reply to Message

That problem is on me - there was a change to FairMQ in FairRoot/dev which I do not yet have accounted for.

In the meantime you can simply exclude that specific file from build, that is in

neuland/CMakeLists.txt

if(ROOT\_VERSION\_MAJOR GREATER 5)
# add\_subdirectory(reconstruction) <-- don't build that for the moment
 add\_subdirectory(clustering)
 add\_subdirectory(digitizing)
else(ROOT\_VERSION\_MAJOR GREATER 5)</pre>

Best, Jan
