when I login the farm and the .bashrc is automatically sourced, it came out like this:

```
xsong@lxbk0198:/lustre/nyx/panda/songxy/pandaroot/buildPanda$ source config.sh
System during compilation: Debian GNU/Linux 8.7 (jessie)
```

```
                x86_64
System now      : Debian GNU/Linux 8.8 (jessie)
                x86_64
```

You try to run the software on a different
linux flavour than it was compiled on.
This is normaly a serious error, so we stop
the execution at this point.
If you know what you do you can change the
config.sh script to bypass this security issue.

is there anything wrong?
