when I login the farm and the .bashrc is automatically sourced, it came out like this:

```
xsong@lxbk0198:/lustre/nyx/panda/songxy/pandaroot/buildPanda$ source config.sh
```

```
System during compilation: Debian GNU/Linux 8.7 (jessie)
```

```
      x86_64
```

```
System now      : Debian GNU/Linux 8.8 (jessie)
```

```
      x86_64
```

```
You try to run the software on a different  
linux flavour than it was compiled on.
```

```
This is normaly a serious error, so we stop  
the execution at this point.
```

```
If you know what you do you can change the  
config.sh script to bypass this security issue.
```

is there anything wrong?
