when I login the farm and the .bashrc is automatically sourced, it came out like this:

```
xsong@lxbk0198:/lustre/nyx/panda/songxy/pandaroot/buildPanda$ source config.sh
```

```
System during compilation: Debian GNU/Linux 8.7 (jessie)
```

```
      x86_64
```

```
System now      : Debian GNU/Linux 8.8 (jessie)
```

```
      x86_64
```

You try to run the software on a different linux flavour than it was compiled on.

This is normally a serious error, so we stop the execution at this point.

If you know what you do you can change the config.sh script to bypass this security issue.

is there anything wrong?
