Subject: Problem installing PandaRoot trunk (rev. 30029) on local work station

Hi,

when I wanted to do an "svn update" on my work station, I found that my FairSoft and FairRoot versions were outdated. I then installed the recommended versions. After this I tried to install the current pandaroot trunk version.
I'm getting many messages of the type "cannot open linkdef file xxx.h" which I don't know how serious they are.
The first explicit error message is:
"Error: Symbol delete is not defined in current scope
/private/fairsoft/fairsoft_may16p1/pandaroot/stt/PndSttGeometryMap.h:31: "
Then the installation proceeds until:
"[42%] Building CXX object
pgenerators/EvtGen/EvtGen/CMakeFiles/EvtGen.dir/R01-03-00/src/EvtGenMode
ls/EvtWnPi.cpp.o
[42%] Linking CXX shared library ../../../lib/libEvtGen.so
[42%] Built target EvtGen
[42%] Linking CXX shared library ../lib/libPGen.so
[42%] Built target PGen
Makefile:138: recipe for target 'all' failed
make: *** [all] Error 2"

See the full logfile attached.
What does this mean?

Albrecht
