Hi,

when I wanted to do an "svn update" on my work station, I found that my FairSoft and FairRoot versions were outdated. I then installed the recommended versions. After this I tried to install the current pandaroot trunk version.

I'm getting many messages of the type "cannot open linkdef file xxx.h" which I don't know how serious they are.

The first explicit error message is:

"Error: Symbol delete is not defined in current scope

/private/fairsoft/fairsoft_may16p1/pandaroot/stt/PndSttGeometryMap.h:31: "

Then the installation proceeds until:

"[42%] Building CXX object

pgenerators/EvtGen/EvtGen/CMakeFiles/EvtGen.dir/R01-03-00/src/EvtGenMode
ls/EvtWnPi.cpp.o

[42%] Linking CXX shared library ../../lib/libEvtGen.so

[42%] Built target EvtGen

[42%] Linking CXX shared library ../lib/libPGen.so

[42%] Built target PGen

Makefile:138: recipe for target 'all' failed

make: *** [all] Error 2"

See the full logfile attached.

What does this mean?

Albrecht
