Hi,

when I wanted to do an "svn update" on my work station, I found that my FairSoft and FairRoot versions were outdated. I then installed the recommended versions. After this I tried to install the current pandaroot trunk version.

I'm getting many messages of the type "cannot open linkdef file xxx.h" which I don't know how serious they are.

The first explicit error message is:

```
"Error: Symbol delete is not defined in current scope
/private/fairsoft/fairsoft_may16p1/pandaroot/stt/PndSttGeometryMap.h:31: "
```

Then the installation proceeds until:

```
"[ 42%] Building CXX object
```

```
pgenerators/EvtGen/EvtGen/CMakeFiles/EvtGen.dir/R01-03-00/src/EvtGenMode
ls/EvtWnPi.cpp.o
```

```
[ 42%] Linking CXX shared library ../../lib/libEvtGen.so
```

```
[ 42%] Built target EvtGen
```

```
[ 42%] Linking CXX shared library ../lib/libPGen.so
```

```
[ 42%] Built target PGen
```

```
Makefile:138: recipe for target 'all' failed
```

```
make: *** [all] Error 2"
```

See the full logfile attached.

What does this mean?

Albrecht
