Subject: Problem installing external packages with Root 6
Posted by Albrecht Gillitzer on Wed, 17 May 2017 11:58:24 GMT

Hi again,

Following your advice I tried to install FairSoft with Root 6, exactly as described in the installation guide.
However it ends with an error message - see the last 10 lines (complete log file in attachment):

*** Unpacking geant4.10.02.p01.tar.gz ....
*** Compiling Geant4-lib ....
*** Compiling Geant4-build ....
*** geant4 compiled successfully ***
*** Compiling xrootd ....
*** Compiling root ....
Copied rootconfig.sh ....
Configure Root ....
*** ERROR: root could not be created.
*** End installation of external packages with Errors***

What's wrong now?

I chose the "No Debug" option. Should I repeat the procedure with the "Debug Info" option?

Albrecht
