Hi Somen,

I wonder how you come to the versions of CbmRoot, FairRoot, and FairSoft you use in the autoinstall script. Since you try to compile CbmRoot JUN16 release the versions defined in the script are FairSoft nov15p6 and FairRoot v-15.11e. For your compilation you use FairSoft may16p1 and FairRoot v-16.06b which are the versions used for the trunk version of CbmRoot.

The CbmRoot release JUN16 will not work with the latests FairSoft and FairRoot versions. There have been many changes which are incompatible with the CbmRoot release JUN16. Beside the error you encounter already there are many more problems.

Either use

> FairSoft nov15p6 and FairRoot v-15.11e with CbmRoot JUN16

or

> FairSoft may16p1 and FairRoot v-16.06b with CbmRoot trunk

A mixture of both will not work.

Ciao

Florian
