Subject: Re: Error in installation of CBM ROOT using auto-install command
Posted by Buddhadeb Bhattacharjee on Wed, 24 May 2017 10:15:44 GMT

Hi Uhlig,

Thank you for your reply.

I have changed the versions in 'autoinstall_framework.sh' file, which is under the source directory. Earlier I was tried to install the simulation software using default versions(fairtsoft:: nov15p6 and fairroot:: v-15.11e), but error was occurred at the time of fairsoft installation (using command:: autoinstall_framework.sh 1). The error message is given below.

Error message:

```
================================================================
= ==============================
processes for build :  4
Installation Directory:  /home/somen/cbmsoft/cbmroot/fairsoft_nov15p6_root5/installation
Found cmake version 3.5.1 which is newer than the
required version 3.1.0 in PATH
This version is okay. Don't install cmake as external package.
*** Unpacking gtest-1.7.0.zip ..............
--E-- Cannot unpack package gtest
done installing FairSoft

================================================================
= ==============================
```

Thanking you with appreciation.

Somen
