Hi!

Good morning!

When I used the input file urqmd.f14 (which already exists with installation package, this input data may be generated using UrQMD-1.3), the tof_sim.C macro running successfully. But, when I used my own UrQMD-3.4 generated data in .f14 format as input, the compilation shows an error. The error message is given below-

Error message:

```

```

Can someone help me to convert our generated .f14 file to the right kind of .root file, which is compatible with tof_sim.C macro.

Thanks in anticipation,

Somen
