
Subject: How to write Macros with newest trunk code

Hello,

I updated to the newest FairRoot (17.03) and pandaroot code (trunk), and cannot get the lmd macros to work (or also the macros in macro/run). Our lmd macros seem not to be compatible with the current development trunk as they all create double free corruption errors. Is there any macros that should work and have been tested with this development setup? Then I have some guideline on how to steer the whole simulation and reconstruction chain and adapt our macros to the new FairRoot. Thanks in advance

Stefan
