Hi Ralf!

I'm using the FairSoft mar16p1 with root6, FairSoft 17.03, and the Pandaroot trunk. There I try to run the macro "macro/lmd/runLumiPixel0SimDPM.C". That macro is a bit special and needs an raw event data input file to run. So if you want to let the macro run and see the output, maybe just try running the runLumiPixel0SimBox.C macro. That one runs without the event input file. I have not executed that SimBox script, but it should also not work and just have an empty output root file (due to the zero energy loss).

Cheers,
Stefan
