

Hi, Ralf,

This is for your further information/question again. May be you are the only one who can answer it.

I try to include the head file "Pnd4CFitter.h" by add the absolute path, but the compiler tell me "

/u/zliu/nyx/pandaroot/PndTools/PndParticleFitters/Pnd4CFitter.h:12:25: fatal error:

Rho4CFitter.h: No such file or directory

```
#include "Rho4CFitter.h"
```

^

compilation terminated.

"

Then I further have a look at the file "Pnd4CFitter.h" & "Pnd4CFitter.cxx", it's almost empty !
Here I print out "Pnd4CFitter.cxx", only one sentence inside:

```
#include "Pnd4CFitter.h"
```

And "Pnd4CFitter.h":

```
#ifndef Pnd4CFitter_h
#define Pnd4CFitter_h
////////////////////////////////////// //
//                                     //
// Pnd4CFitter                        //
//                                     //
// A typedef for convenience
// Author R.Kliemt 2014 GSI
//
//                                     //
////////////////////////////////////// //
#include "Rho4CFitter.h"
```

```
typedef Rho4CFitter Pnd4CFitter;
```

```
#endif
```

I am wondering, is this an error due to my PandaRoot installation?
Or in this PandaRoot version-feb17, the 4C fitter is still not prepared?
If the later case is true, can I just copy the 4C fitter source files back
from an early version and compile again?

Thanks for your answer.

Best Regards,
