Hi Tobias,

hmm ok I tried it with the dev branch, but with the same result. I get this error

Quote:

CMake Error at /cvmfs/cluster/tools/cmake/3.5.0/share/cmake-3.5/Modules/ExternalProject.cmake:1915 (message):

No download info given for 'vc' and its source directory:

/home/pflueger/PandaRoot/external/vc

is not an existing non-empty directory. Please specify one of:

- * SOURCE_DIR with an existing non-empty directory
- * URL
- * GIT_REPOSITORY
- * HG_REPOSITORY
- * CVS_REPOSITORY and CVS_MODULE
- * SVN_REVISION
- * DOWNLOAD_COMMAND

Call Stack (most recent call first):

/cvmfs/cluster/tools/cmake/3.5.0/share/cmake-3.5/Modules/ExternalProject.cmake:2459

(_ep_add_download_command)

external/CMakeLists.txt:13 (ExternalProject_Add)

The CMakeLists.txt in the externals/ directory just points to the externals/vc subdirectory in the Pandaroot source, which is empty.

Cheers,
Stefan
