Subject: Re: Installing dec17 with svn and git Posted by Walter Ikegami Andersson on Thu, 15 Feb 2018 13:26:27 GMT View Forum Message <> Reply to Message

Hello Ralf,

thanks for the quick reply. I cloned pandaroot two days ago. Now, with the hotfixes in the master and dev branches, pandaroot master compiles.

But what about the dec17 tag? I don't see the hotfixes in the dec17 tag and if I git checkout -b dec17 dec17 and then compile, I still have the same issue as before. If I checkout pandaroot master, compile it, then git checkout dec17, then the dec17 compiles since the external/vc files were downloaded during the compilation of master and switching to dec17 does not remove those files.

Should the hotfixes be implemented into the dec17 tag as well?

Cheers, Walter
