Subject: Re: Produce ROOT file with FairRoot Structure Posted by wesmail on Mon, 19 Mar 2018 13:20:46 GMT View Forum Message <> Reply to Message

Dear Stefano,

thank you very much for your instant reply. I am aware of the associator task, but I don't know how to use it because at Init() method it tries to get the TCIonesArray from the input file and I face the same problem ("PidAlgoMI is not in cbmout folder" because my file is not in the same RootFair structure) and crashes.

N.B I fill the TClonesArray in a python program independent of FairRoot package, but I can access FairRoot from python. How to use Register method independent from associator Task?!.

GSI Forum

Thank you again,
